KEY GUIDING QUESTIONS - EXAMPLES

Sustainable Rural Livelihoods Framework

Natural capital

- Are there any differences are the way in which men, women and other social group access and control?
- How does this affect their vulnerability to drought?

Human capital

- Investigate the highest level of education of adult members of the households? How does the educational level and training opportunities differ by gender and age? How does this affect the individual's ability to cope with drought?
- Are there gender differences in access to health care and nutritional support during drought at the household or community levels? How does this affect resilience?
- What are the existing gender roles in the labour market and how do they influence the capacity to adapt to drought.

Social capital

- What social networks and support systems are available for men women and other social categories in the community or region? How do these enhance coping capabilities of each social category? Are there any differences in the type of assistance rendered?
- How are men and women involved in community decision-making and drought or climate change planning?

Physical capital

- Are there differences in access to and use of essential infrastructure such as water, markets, land, housing, transportation and so on

Financial capital

- How do sources of income differ by gender, age, marital status and physical ability? How are sources of income occupations affected by drought? How might this affect financial stability during drought?
- Is there access to credit in the community or region? How does access to credit and savings vary be gender, age and marital status? How does this impact the ability to manage drought related challenges?

Livelihood strategies

- Are there differences in strategies used by men, women, youths and persons with disabilities and different ethnic groups in coping with drought?
- How do gender and social roles influence the diversification of livelihoods?
- What gender specific strategies are employed to manage risks associated with drought
- Who makes decisions on the type of strategies to employ during drought periods? When are drought and climate related planning decisions made at the household level?

Policies and institution

- How do existing policies include and exclude gender perspective in drought planning and management?
- What institutional support is available for men, women and other social categories in addressing vulnerability in drought periods?
- How does the institutional support enhance the ability of men, women and other social categories in coping with drought?

Outcomes

- How do drought impacts differ amongst men, women and other social categories?
- What are the long term effects of drought on men, women and other social categories' livelihoods and how can these be mitigated?

Socio-economic analysis and gender analysis (SEAGA)

Field level

- What are the main livelihood and productive activities in the area? How do these vary by gender?
- How does drought affect the men, women and other social categories' roles in agriculture and other productive activities
- Are there differences in the impact of drought on the livelihoods of men and women?
- How do men, women and other social categories access and control natural resources such as land, water, grazing areas and other productive resources such as seeds?
- Are there any barriers in accessing resources for certain social groups (men, women, youth, person's with disabilities, the elderly etc.) during drought?
- What agricultural practices and technologies are used by men, women and other social categories? Are they equally beneficial?
- How do the gender roles influence the adoption of drought resistant crops and water saving technologies?
- How do gender norms affect access to information and education?
- Do men, women and other social categories have equal access to knowledge and training on drought management?
- What are the current adaptation strategies employed by men, women, youths and other social categories to cope with drought?

Household level

- What are the roles and responsibilities of men, women and youths within the households?
- How does drought impact the division of labour in the household?
- Who makes decisions and resource use, finances and family welfare during drought?
- Are there gender differences in decision making power within the households?
- Are there gender disparities in access to healthcare during drought?
- How does drought affect the health and nutrition of different household members (men, women, youths, the elderly, children, person with disabilities and those with chronic illnesses)?

Community level

- How do women, men and other social categories use social networks for support during drought?
- Are there gender differences in access to community resources and support systems?
- Are men, women and youths equally represented in community decision-making processes?
- How do gender dynamics influence community level drought management strategies?
- What cultural and social norms influence gender roles and relations during drought?
- Are there traditional practices that affect gender equality and social inclusion in drought planning and management?

Intermediate Level

- How do local institutions and organisations impact the management of drought and the equitable distribution of resources?
- Are local institutions inclusive of different genders in their policies and decision making processes?
- How do diverse member e.g men, women and youths access extension services, credit, training and other support services for drought?
- Are there barriers to access based on gender or age, and how can these be addressed?
- How do market dynamics affect livelihoods of men and women during drought?
- Are there differences in access to markets and market information for men and women?
- How are disputes over resources managed, and do men and women have equal access to conflict resolution mechanisms?
- Is there legal protection in place for equitable resource management?

Macro level

- Are national policies and legal frameworks for drought management gender sensitive?
- How do national policies address gender disparities in access o resources and support during drought?

- How are resources allocated at the national level for drought management and are gender considerations included?
- Are funds and resources directed towards addressing specific needs of different genders
- Is there gender disaggregated data collected and used for planning and monitoring drought management
- What measures are in place to ensure that gender and inclusion information is incorporated into the national drought policies?
- How are national level advocacy and awareness campaigns designed to address gender issues in drought management?
- Are campaigns inclusive and accessible to different genders, particularly those most affected by drought?
- How do national level institutions collaborate and coordinate to address gender and inclusion in drought management?
- Are there partnerships with Civil Society Organisations (CSOs), community groups, women organisations and departments responsible for gender and other stakeholders to promote gender equality?
